The Power of Protein

Protein-Packed Snacks

At Farbest, we understand the complexity of the protein market—and we're here to help. With more than six decades of industry experience, we know which proteins are best suited for your formulation needs, allowing us to help you make decisions, purchase wisely, and more.

These days, proteins are more important than ever. Consumers are looking for extra protein in everything they eat—especially snack foods. From energy bars to ice creams and more, your food products need to pack a strong protein punch. At Farbest, we know how to do that—without sacrificing flavor, texture, or the integrity of your labels.

To keep your foods protein packed, Farbest carries a diverse, curated line of proteins that will suit all your customers' needs. From rBST-free, grass-fed dairy proteins to organic, non-GMO plant proteins, we're your one-stop shop for all things protein.

Need more than just proteins? We've got those too! Whether you're looking for classic ingredients or some of nutrition's hottest trends, we've got what you need.

So what are you waiting for? **Request your free sample today!**

Q: How many processes are Farbest's caseinates available in?

A: Five!

We offer spray dried, instantized, extruded, roller-dried, and granular caseinates to suit all your formulation needs.

Powerful Proteins

We're all obsessed with protein these days, and for good reason. Why reach for a snack full of empty calories when you could nosh on a protein-rich option that'll keep you fuller longer, support muscle growth, and boost your immune system?

Protein boasts a ton of health benefits, including:

- Weight Management
- Muscle Growth
- Increased Energy
- Immune System Support
- Long Lasting Satiation
- And More!

At Farbest, we want to help you create snacks that consumers reach for over the competition. That means adding protein where they need it most.

Q: Which of Farbest's plant proteins are non-GMO?

A: All of them!

Both our conventional and organic plant proteins are all non-GMO.

Q: Can you combine plant and dairy proteins in a single formulation?

A: Yes!

Blending plant and dairy proteins into the same snack formulation is a great way to create versatile, cost-effective products while maximizing nutritional value.

Holy Cow, That's a Lot of **Protein!**

When it comes to adding protein to your snacks and food products, dairy proteins are hard to beat.

Dairy proteins have exceptionally high protein contents. Caseinates, casein, and milk proteins—all milk protein isolates—feature a protein content of over 90 percent! Adding dairy proteins to your food products is the most efficient way to pump up the protein content in every bite—without sacrificing taste.

Even better, all of Farbest's dairy proteins are hormone free, rBST free, and pasture based, meaning they'll keep your labels clean.

Leveraging **Plant Power**

Creating vegan-friendly options? Plant-based proteins are a great solution. Pea and soy proteins are incredibly versatile, with strong amino acid profiles that allow them to behave similarly to whey. Plus, they're extremely cost effective and available in both conventional and USDA-certified organic forms.

Sources You Can **Trust**

More than ever, the world is shrinking, and food ingredients are sourced from all around the world. Sourcing products from the international market brings an added level of responsibility that Farbest Brands has embraced by implementing Foreign Supplier Verification controls.

We verify that all of our partners have received independent third-party certification, conduct a documentation review, and review allergen control procedures. We understand your concerns, and monitor our supplier's performance to bring our customers high-quality ingredients from around the world.

Q: Which proteins are allergen free?

A: None!

There's no such thing as an allergen-free product. For a low-allergen option, choose pea protein.

Keeping Your **Claims Clean**

At Farbest, we're committed to keeping your labels clean and your claims reliable. That's why we've taken an active approach to sourcing, testing, and verifying all of our ingredients.

We collaborate with our suppliers to understand their processes and determine the risks associated with each ingredient. High-risk ingredients are tested and verified by independent third-party labs. We've also implemented a random product-testing program to verify high-risk products through skip lot testing.

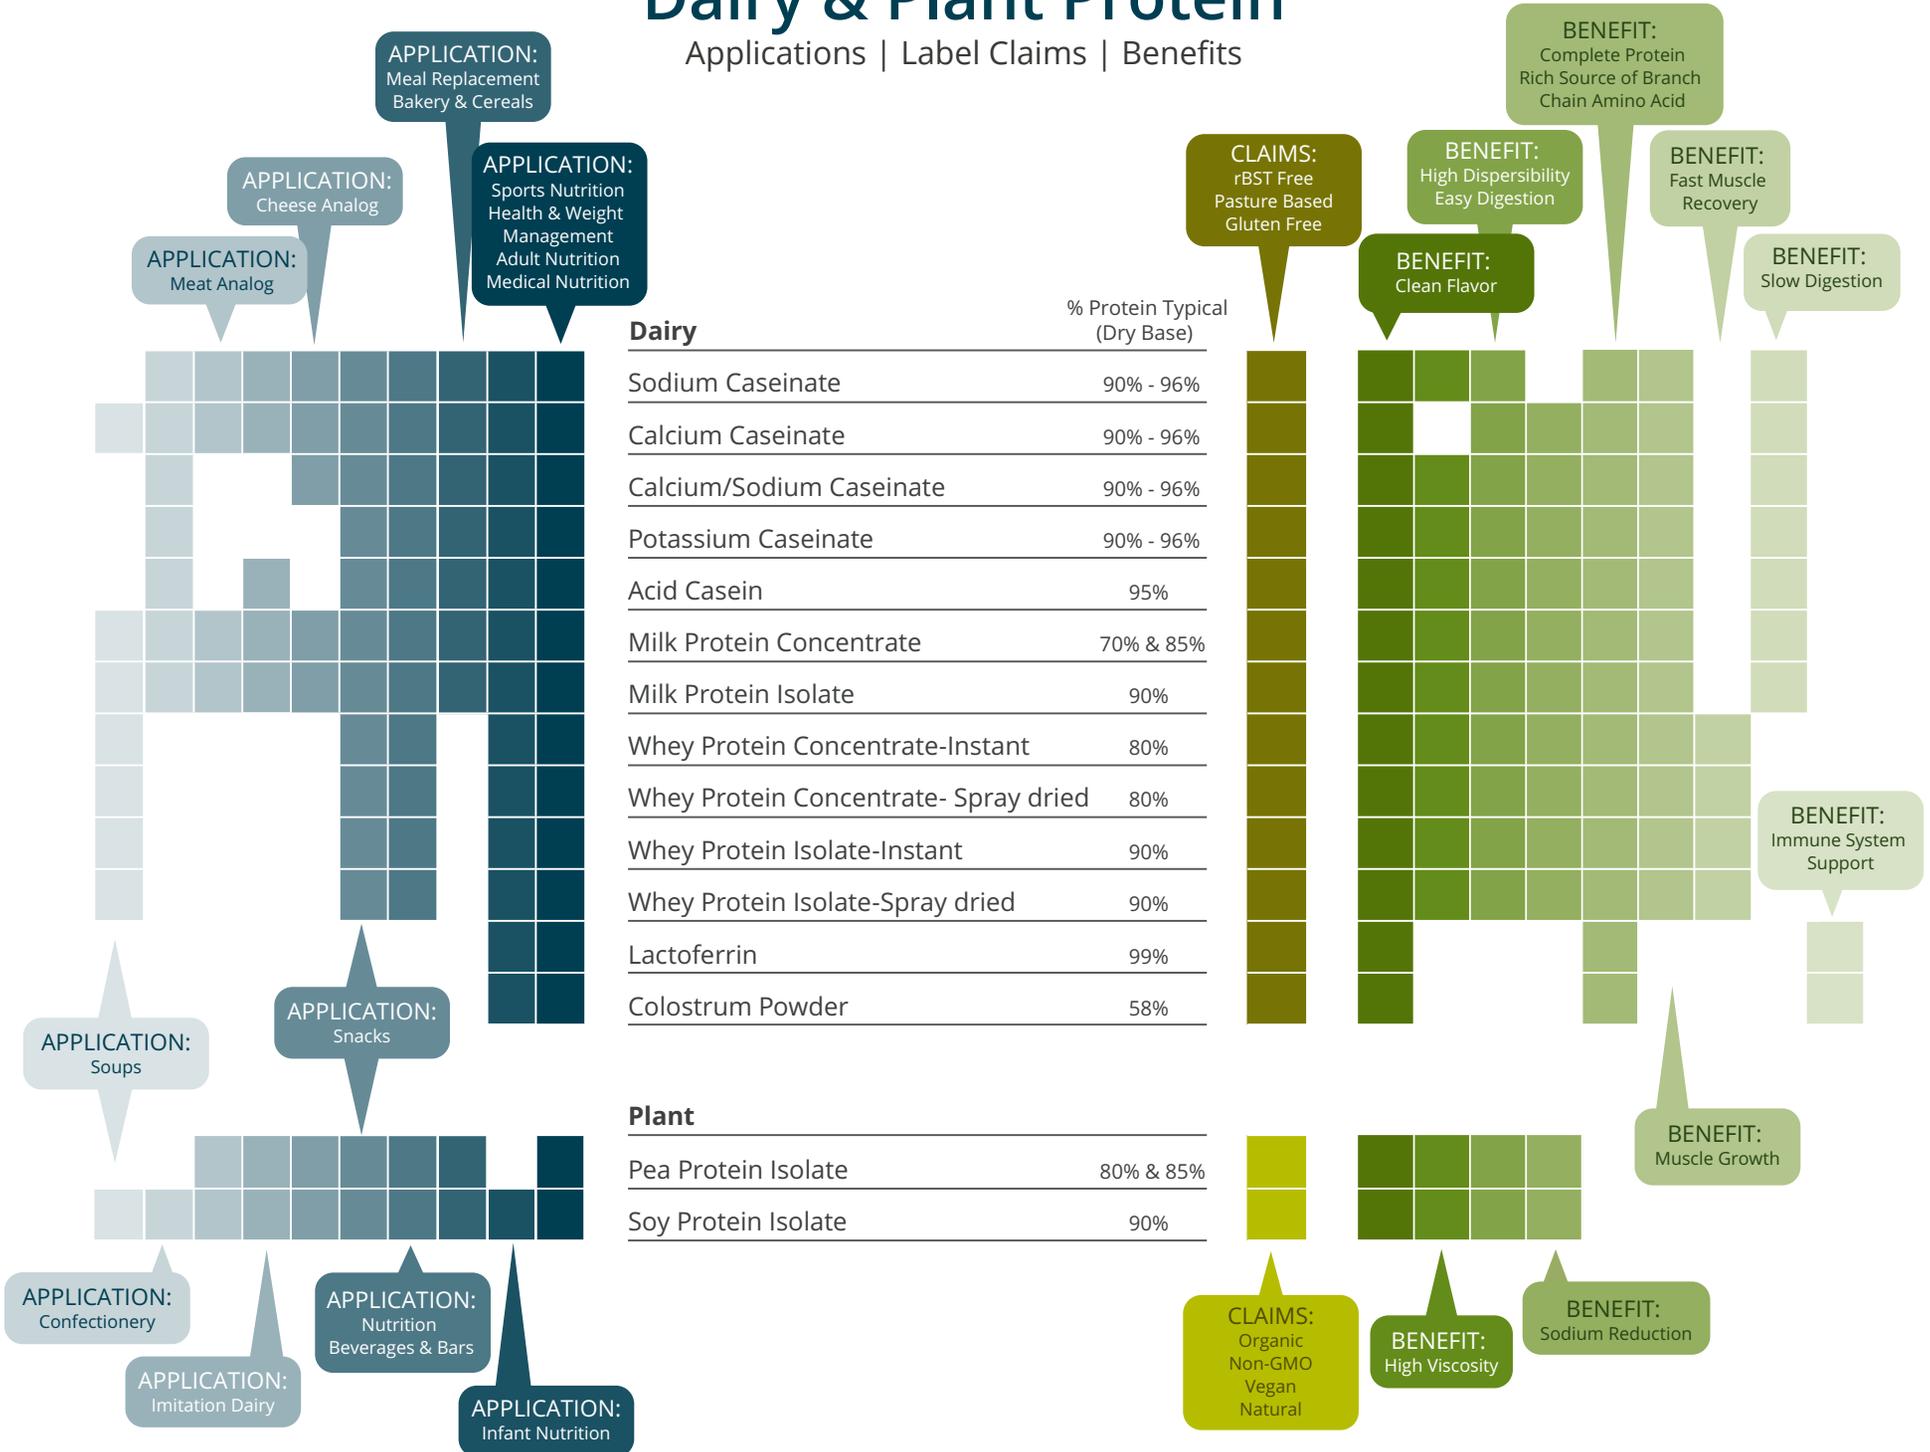

Even better, we're committed to making sure that clean label non-GMO ingredients are the rule—not the exception. We verify all of our ingredients with rigorous third-party certification, conduct a documentation review for low-risk ingredients, and do GMO testing for high-risk ingredients like soy and corn.

From seed to packaging, we're committed to knowing exactly where our ingredients come from—and to keeping your claims and labels clean.
